

HAZARD ASSESSMENT POLICY

Hazard assessment are an integral part of the hazard assessment process. In an attempt to mitigate all hazards existing or potential on a jobsite, E4 Homes Inc workers and subcontractors will conduct hazard assessments on all active jobsites.

Hazard assessments will be conducted prior to beginning any work, as well as once per week on jobsites lasting longer than one week. These hazard assessments will be completed the first working day of the work week. Additional hazard assessments will be completed in accordance with the following criteria:

Hazard assessment criteria:

- New location
- New hazard
- Task performed in a new or different way

The onsite supervisor along with the onsite safety representative will be involved in the completion of the hazard assessment. All workers will have the information from the completed hazard assessments communicated with them and they will sign off to ensure their involvement and understanding.

Hazard assessments will be completed on the H.I.T. list hazard assessment or on a hazard assessment form that has been approved by E4 Homes Inc ownership/senior management.
